

RabbitMQ – Topic Exchange

Gulshan Bajaj

Selective Routing - Example

Routing Key

<Severity>.<Priority>.<Action>.<Component>

Examples:

E.H.A1.C1

E.H.A1.C2

E.H.A1.C3

E.M.A1.C1

....

E.L.A3.C3

W.H.A1.C1

W.H.A1.C2

....

W.L.A3.C3

...

I.L.A3.C3

Subscriber Bindings

- Errors of High Priority on which Action A1 to be taken generated by component C1
 - E.H.A1.C1
- Errors of High Priority on which Action A1 to be taken generated by any component
 - E.H.A1.C1
 - E.H.A1.C2
 - E.H.A1.C3
 - What if a new component is added later?
- Errors of High Priority
 - Too Many combinations i.e. too many bindings
- All Errors
 - Way too many combinations i.e. far larger count of bindings

Solution – Binding Rule Syntax

* - Match One Word

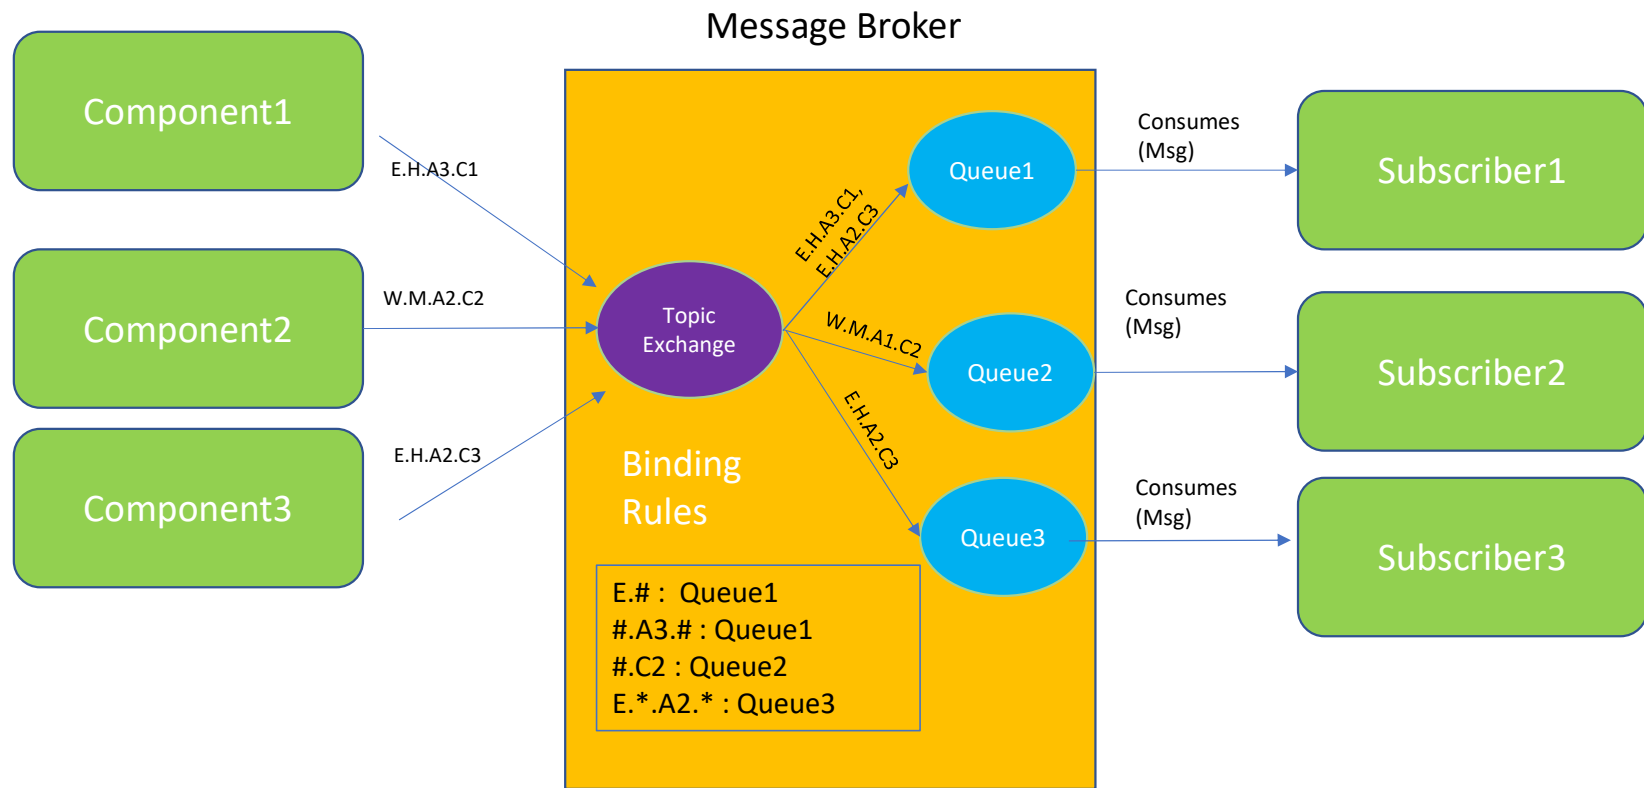

-- Match 0 or more words

Requirement	Binding Rule
Any Error	E.#
Any High Priority	*.H.#
Any A3 event	*.*.A3.* *.*.A3.# #.A3.#
Any event from component C2	#.C2
Any High Priority Error	E.H.#
Any Warning from component C3	W#.C3
Any High Priority Error from component C2	E.H.*.C2
Any medium priority warning for which Action A2 needs to be taken	W.M.A2.*
Any High Priority Information coming from C3 for which action A2 needs to be taken	I.H.A2.C3

Additionally...

- One subscriber can use multiple bindings to attach its queue with the exchange
- If more than one rule matches for a message to a subscriber, the message is delivered to the subscriber only once.
- Multiple subscribers can use same binding to attach their queue with the exchange
- Multiple subscribers can get attached to the same queue, if the queue is not exclusive to a channel
- Any message for which the routing key does not match to any binding rule, is discarded by the exchange

Topic Exchange

Steps

- Publisher
 - Create a connection, say CN
 - Create a channel in CN, say CH
 - Create a **Topic Exchange**
 - Publish the message
 - Close the connection
 - Automatically closes the channel
- Subscriber
 - Create a connection say CN
 - Create a channel in CN, say CH
 - Create the **topic exchange** (will not affect if exchange is already there)
 - Create the queue, if it does not exist already and associate it with the channel CH
 - Bind the queue with the exchange for the required Routing Key(s)
 - Associate a call-back function with the message queue
 - Start consuming the messages

An Important Point
